Development of Mahakali Mandir precinct

Chandrapur, India

Use – Public Market & Community Space

Size M2/Ft2 – 10480 / 1,12,807

Status –On-going

Bazaar of Belonging: Crafting Culture, Creating Opportunity, Celebrating Recreation.

The proposed Open Bazaar envisions a vibrant public destination that celebrates Chandrapur's cultural identity while creating opportunities for economic growth, social interaction, and everyday recreation. More than a marketplace, the project is imagined as an open and inclusive urban space where commerce, culture, and community coexist. By reinterpreting the traditional bazaar as a contemporary public realm, the proposal creates an environment that supports local livelihoods, encourages public participation, and strengthens the connection between people and place. Alongside cultural and commercial functions, the proposal also integrates essential civic infrastructure through the development of a **Fire Station Building**, strengthening public safety and reinforcing the site's role as a multifunctional urban destination.

Strategically located at a prominent urban junction and connected through multiple access roads, the site benefits from high visibility and strong pedestrian movement. Its central position allows it to function as a cultural, economic, and civic anchor within the city while remaining accessible to residents and visitors alike. The surrounding urban fabric presents an opportunity to transform the site into an active public destination that supports local businesses, community activities, and

urban services. The inclusion of the fire station further enhances the site's public value by contributing to emergency readiness and strengthening city infrastructure.

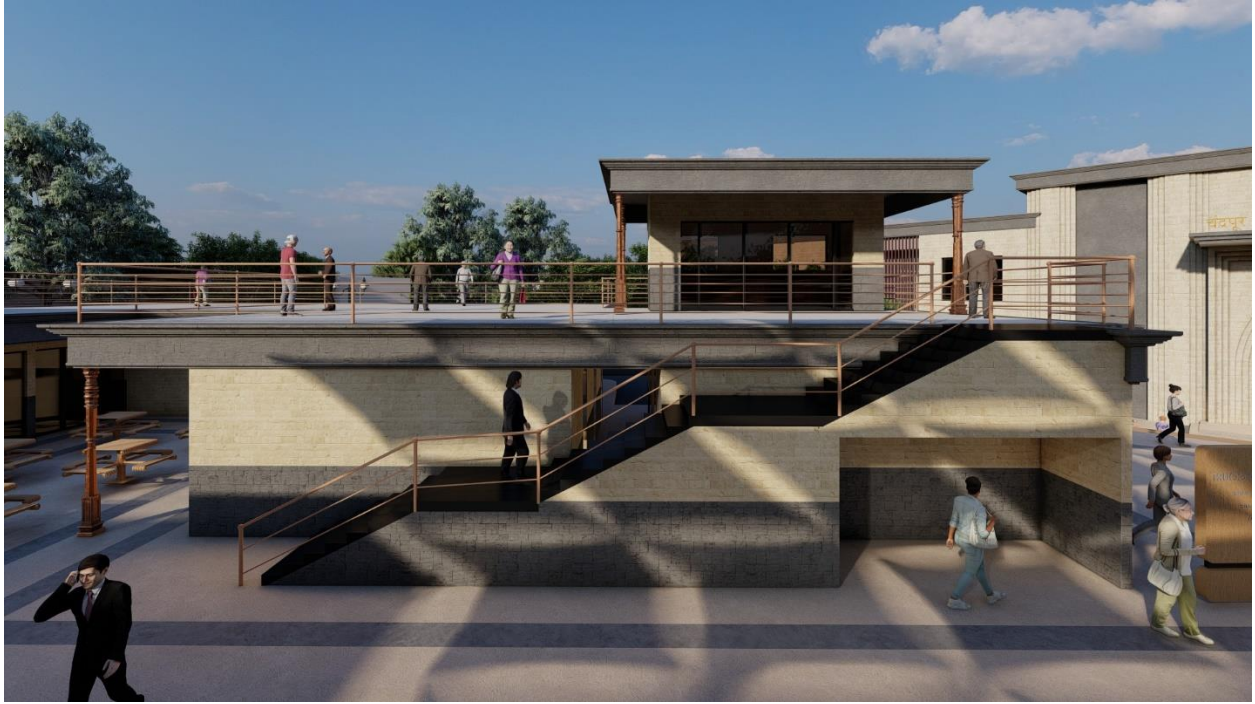

The project is guided by principles of accessibility, inclusivity, walkability, and placemaking. The design prioritizes people over vehicles by creating a pedestrian-oriented environment that supports movement, comfort, and social interaction. Open access from all site edges strengthens connectivity with the surrounding city and encourages seamless public movement. The absence of compound walls creates visual continuity and establishes the site as an extension of the public realm.

Environmental comfort is supported through shaded walkways, landscape buffers, native planting, and climate-responsive design strategies. Public activity areas and civic functions are carefully organized to ensure active yet balanced use of the site while maintaining efficient access and operational functionality for emergency services.

The planning strategy focuses on creating an active, safe, and visually permeable public environment. Wide pedestrian pathways, shared surfaces, raised crossings, and seamless street-to-site transitions establish an accessible and comfortable user experience. Parking is limited to the periphery to prioritize walkability and reduce vehicular dominance.

The architectural language emphasizes openness, flexibility, and visibility. The bazaar façades are designed with transparent and active edges that encourage interaction between public and commercial activities. Lightweight structures, shaded interfaces, and adaptable market fronts create a lively streetscape. The fire station is integrated through a contemporary and functional architectural expression that maintains operational efficiency while remaining visually connected to the overall public character of the development.

The Open Bazaar is envisioned as more than a commercial destination—it is a civic and cultural landscape designed to celebrate identity, create opportunities, and strengthen community life. By combining local commerce, recreation, public gathering, and essential urban infrastructure through the inclusion of the fire station, the project transforms the site into a resilient and inclusive public destination. The proposal creates a place where culture, opportunity, and public life come together to shape a vibrant future for Chandrapur.
